Heterogeneity Resolved with Specificity

Spatially resolve tissue cell populations with functional segmentation

Understanding tissue heterogeneity is crucial to studying developmental biology, disease pathogenesis, and response to treatment. Bridging the gap between tissue imaging and molecular profiling technologies such as single cell analysis, the GeoMx® Digital Spatial Profiler (DSP) allows you to unlock novel biological insights with spatial multiomics.

Introducing

GeoMx®
Digital Spatial Profiler

GeoMx DSP seamlessly enables spatial transcriptomics and proteomics with a workflow that combines standard pathology and molecular profiling with efficient data analysis.

GeoMx RNA assays enable quantitative, spatial analysis of 100s of transcripts up to the whole transcriptome from a single section of FFPE or fresh frozen tissue.

GeoMx Protein assays enable targeted spatial profiling of 100s of proteins from FFPE tissue sections.

GeoMx DSP also enables Spatial Proteogenomics by combining both Protein and RNA assays on the same slide.

FOR RESEARCH USE ONLY. Not for use in diagnostic procedures.
The Path is Clear

GeoMx® DSP Workflow

Using standard IHC methodologies, tissue sections are stained with a mixture of fluorescently-labeled and DNA-barcoded antibodies. Once imaging and profiling is complete, GeoMx DSP stores data from each region of interest (ROI) after the expression of a target is quantified.

1. Sample Prep*  
2. Profile

Any sample, FFPE or fresh frozen, use any morphology marker, detect RNA and/or Protein.

*Can be automated.

Image and profile RNA and Protein with GeoMx DSP.
Count barcodes on the nCounter® Analysis System or sequence with NGS.

Pre-defined data processing pipelines and interactive data analysis accelerate biological insight.
Enabling Your Research with the Most Flexible Spatial Solution

Whether you are a discovery or translational researcher, the GeoMx® DSP is the most flexible spatial solution designed to conform to your ever-changing research needs.

GeoMx DSP combines standard immunofluorescent techniques with molecular profiling technology to perform highly multiplexed, spatially resolved experiments.

- Tissue Atlasing
- Unbiased Pathway Analysis
- Immune Profiling
- Biomarker Discovery and Validation
Locate Your Regions of Interest
Understand Tissue Structure with Flexibility

Geometric Profiling
Profile with any geometric shape to characterize distinct tissue regions.

Segment Profiling
Identify and profile distinct biological compartments within a region of interest (ROI).

Conture Profiling
Evaluate how proximity affects biological response and the local microenvironment around a central structure using radiating ROIs.

Gridded Profiling
Perform rigorous spatial mapping using a tunable grid pattern.

Cell Type Specific Profiling
Reveal the function of cell populations guided by cell type specific morphology markers.

The Islet of Langherans is geometrically profiled with Insulin, glucagon and PanCK morphology markers.

A 5 µm section of kidney depicts the proximal convoluted tubule. This section has been segment profiled guided by CD10 and CD31 morphology marker staining.

The invasive margins of two colorectal tumor samples are analyzed using contour segments extending into the tumor and outside the tumor into the stroma and profiled with 1400+ RNA probes with NGS read out.

Gridded protein profiling of a tonsil section, stained with morphology markers CD3, CD20 and PanCK.

Paneth Cells from the Colon, stained with morphology marker 5-HT.
Flexible, Pre-Validated Protein Content to Fit a Range of Research Needs

GeoMx® protein assays are modular and optimized for robust performance across a variety of sample types. Choose your readout method and the core of your choice. For readout on the nCounter® Analysis System, add on up to 6 modules plus as many as 10 custom targets of choice. For NGS readout, add on as many different modules as you prefer plus up to 10 custom targets of choice.

Available content covers immunology, immuno-oncology, and neuroscience with a rapidly growing portfolio.

Proteogenomics Meets Spatial Biology with GeoMx DSP

Simplify your spatial proteogenomic workflow with multimodal, co-detection of RNA and Protein from the same tissue section. Combine the GeoMx RNA Assays and GeoMx Protein Assays to gain a complete picture of biology all the way from transcription to protein activation.
GeoMx® Whole Transcriptome Atlases

Spatial Resolution for Any Target

The GeoMx Whole Transcriptome Atlas (WTA) provides an unbiased, spatial view of all protein-coding genes by leveraging the power of NGS. Whether you are mapping the architecture of tissue or exploring the regulation of morphological features, WTA delivers the highest sensitivity for spatial whole transcriptomics on FFPE tissues.

Explore More GeoMx RNA Assays

GeoMx RNA assays include an immune pathways panel for nCounter readout that allows for profiling of up to 84 human RNAs, including probes for the Tumor Inflammation Signature (TIS) and the ability to add up to 10 targets of interest and 2 additional controls. For higher plex spatial transcriptomics, take advantage of NGS readout and choose from the targeted Cancer Transcriptome Atlas or design a Custom RNA Assay of up to 400 targets from any species.
Explore Your Data

GeoMx® Data Analysis Suite (DSPDA)

DSPDA is an interactive data analysis suite that connects quantitative data to spatial context to provide a seamless experimental workflow.

Visualize your counts based on your ROI selection
Data QC and normalization
Visualize pathway analysis, differential expression, heatmaps and more!

GeoScript™ Hub

NanoString has validated and released code packages to the open-source community; Explore GeoScript Hub to see how these tools can be used to configure data analysis pipelines.

Normalization for Protein RNA Negative Normalization Spatial Decon

Dimension Reduction Volcano Plot Cell-Type Contouring

Scan to learn more about the GeoScript Hub
Consistent Results, Reliable Answers
Multi-Sample Analysis and Cohort Studies Made Easy with Unmatched Reproducibility and Scalability

Proven reproducibility between slides, users, and instruments with the Whole Transcriptome Atlas.

Detect More with Sensitivity
GeoMx® DSP detects the most relevant low to high expressing genes. Detect only the targets that matter in the regions that matter.
