

Development and validation process for customized GeoMx-formatted antibodies from Abcam

Abcam and NanoString have partnered so that Abcam can develop and provide custom GeoMx-formatted versions of Abcam's IHC-validated recombinant rabbit monoclonal antibodies for use in the GeoMx® Digital Spatial Profiler (DSP) alongside panels of antibodies purchased from NanoString.

Custom oligo-conjugation process through Abcam: antibodies are delivered after successful IHC QC of conjugated antibodies, with payment only on delivery. Success in IHC QC is the main predictor of success in Digital Spatial Profiling.
